Introduction

With a long term vision to modernize Chinese medicine, Nong's is one of the first few in the region to introduce a full spectrum of quality and scientifically-developed concentrated Chinese Medicine granules, supported with a modernized computerized program of Nong's Clinical Management System. Nong's Company Ltd. with its range of single and combo concentrated Chinese Medicine granules is the only manufacturer approved by SATCM of the People's Republic of China. Nong's is the first and only Chinese medicine manufacturer licensed in China to produce the full range of Chinese Medicinal Granules using traditional Chinese Medicine Combo Formula.

Concentrated Chinese Medicine Granules

Concentrated Chinese Medicinal Granules are traditional Chinese medicinal herbs extracted by replicating the traditional method of preparing decoction using modern extraction and concentration technologies. It is a dosage form derived from Chinese herbs with accountable standards, dispensed in a way without changing the philosophy of authentic Chinese medicinal theory, yet providing a solid platform for future evidence-based research. It is free from the time-consuming and inconvenient decoction method which was required in preparing traditional Chinese medicinal herbs in the old days. Concentrated Chinese medicine granules should have the same degree of curative efficacy, taste, aroma and flavor as in traditionally-prepared medicinal decoction. It should also dissolve in hot water instantly.

There are two types of Concentrated Chinese Medicine:

1. Single herb extract (as components of a complex formula)
 - The single herb extracts are normally used in a way for practitioners to prescribe a tailor-made formula for a particular patient according to his/her conditions.
2. Combination of herb extracts (Premixed formula of a mixture of herbs at extraction)
 - Used in its entirety for treating a particular indication or disease.

Advantages of Concentrated Chinese Medicine granules:

- Convenient to consume. Saves time in preparing traditional decoction.
- Hygienic, safe and stable efficacy
- Manufactured under strictly controlled GMP standards thus avoiding the risk of using the wrong herbs for preparing medicines.
- Professionally tested for heavy metals, microbial and acute toxicity. Reliability and safety are therefore ensured.

- Less space requirements for Chinese medicine practitioners than storing the bulky raw herbs
- The simple system of managing concentrated Chinese medicine granules makes it easy for normal people to administer as trained herbalists to identify and prescribe raw herbs are getting scarce.
- The difficulties in maintaining and managing the quality of raw herbs eg. prevention of insect infestation, moisture, temperature, etc. can be avoided.
- Standardized concentrated Chinese medicine granules provide a solid platform for future evidence-based research in the development of modernizing Chinese medicine.
